

NEVER TOUCH TICKETING

Easily provide **touchless ticketing** to your customers

COVID-19 and the resulting “new normal” has placed greater emphasis on eliminating touchpoints everywhere. For parking, this has put a spotlight on your garage’s first impression... the ticket button.

Introducing **Never Touch Ticketing** - an easily adaptable contactless ticketing solution for your Parkonect hardware. Parkers simply wave their hands over the motion sensor to receive their ticket. No need to touch a button or a screen.

Our Never Touch technology integrates seamlessly with all Parkonect ticketing hardware, either as a replacement to or in complement with, your existing ticketing touchpoint.

Truth be told, adding a motion sensor to your equipment isn’t rocket science, nor is it overly innovative or difficult to do. It’s a simple, cost-effect solution that tells your customers you are committed to their safety.

Let us help you win your customer’s back. And if you really want to provide an end-to-end contactless journey, check out our innovative digital tools: Text to Enter, ParkingCashier, GetMyReceipt and Flex Parking Cards.

100% contactless

Easy and flexible deployment

Seamless integration
